370HP

370 HP geotextile is composed of high-tenacity monofilament polypropylene yarns, which are woven into a network such that the yarns retain their relative position. 370HP geotextile is inert to biological degradation and resistant to naturally encountered chemicals, alkalis, and acids.

Our Laboratories are accredited by a2La (The American Association for Laboratory Accreditation) and Geosynthetic Accreditation Institute - Laboratory Accreditation Program (GAI-LAP). NTPEP Listed
