

## Bronchitrac® "L" Set

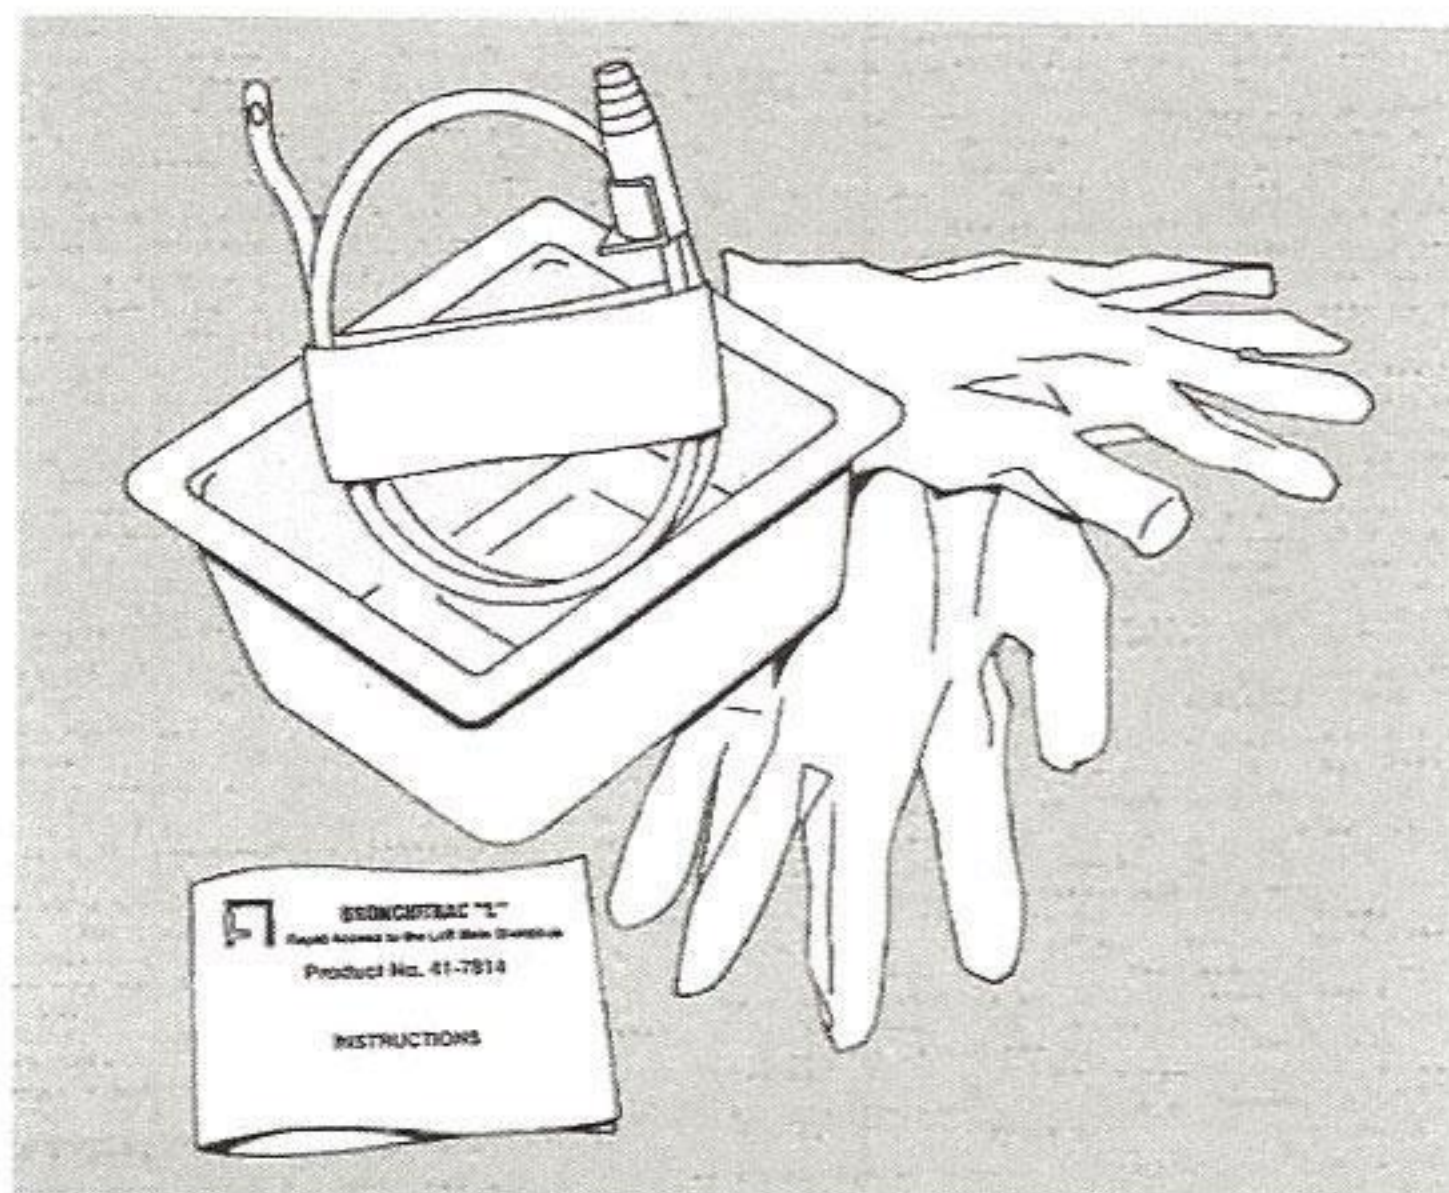

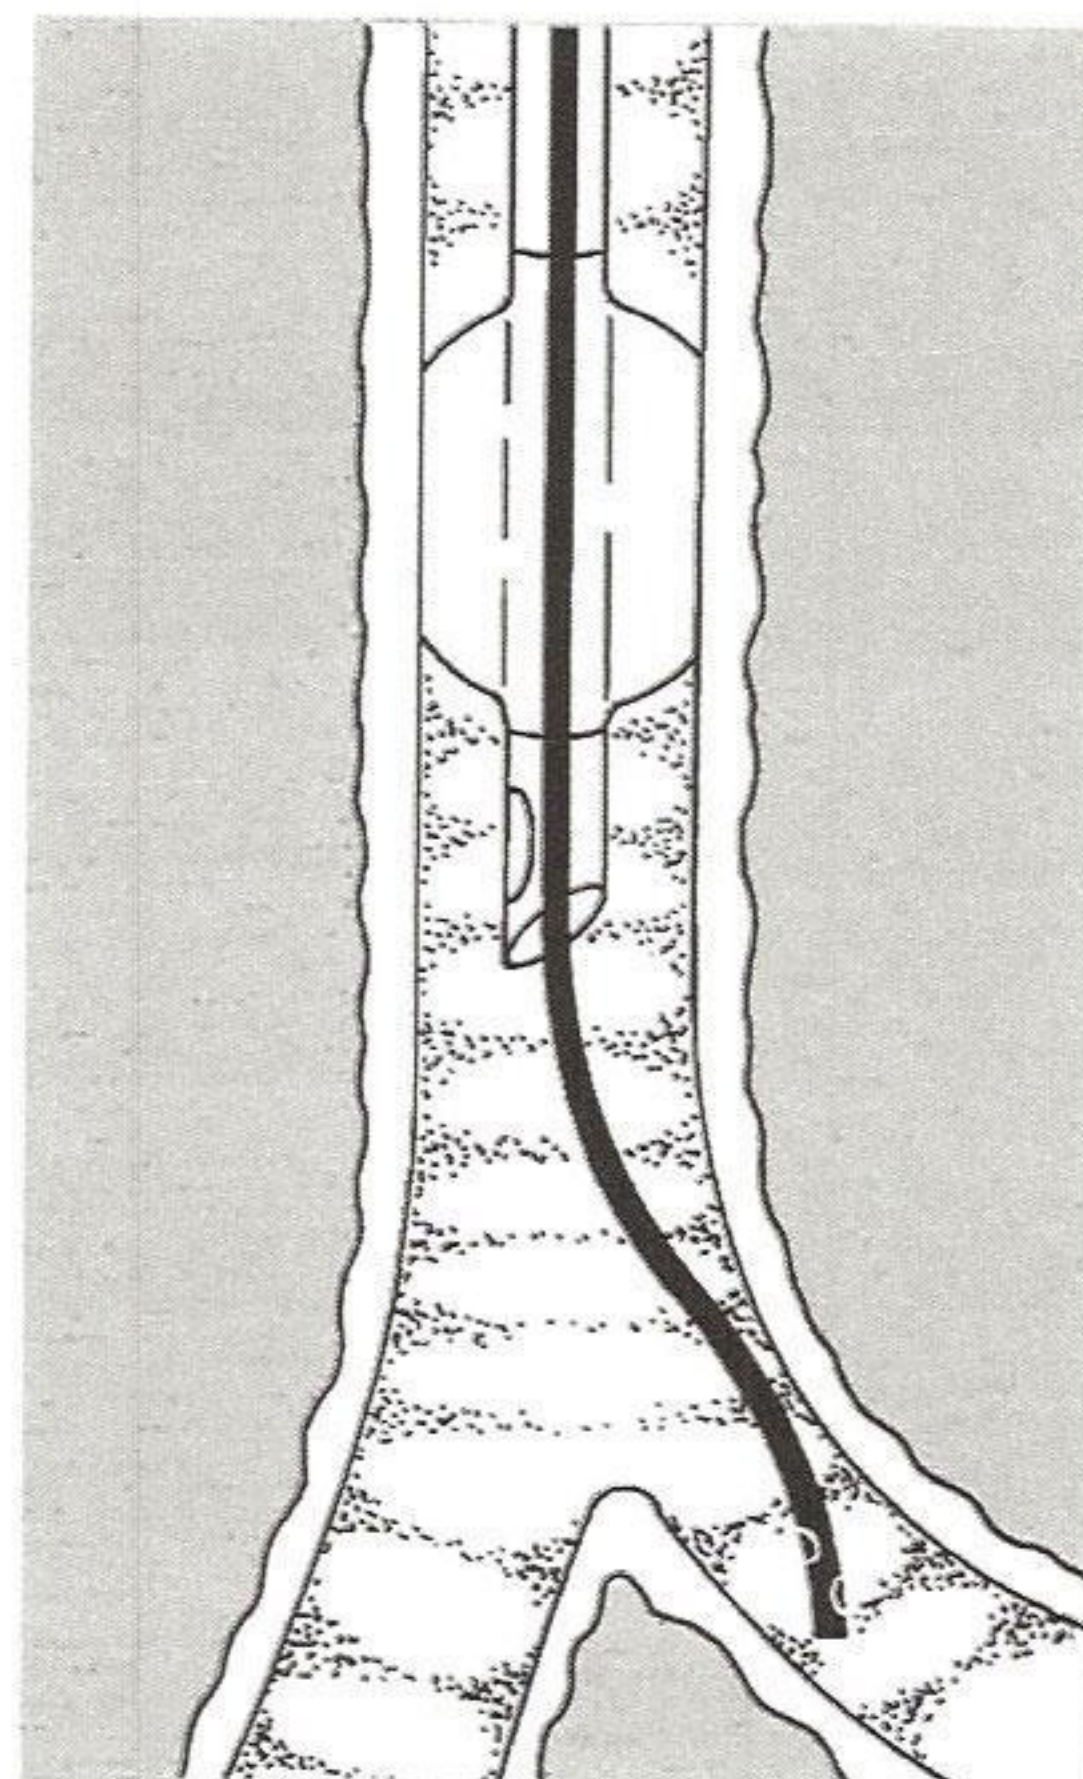

### Automatic entry into the left main-stem bronchus

**The only suction catheter specifically designed for left-bronchus access in an easy-to-use tray.**

Simply advance the Bronchitrac "L" through a properly placed endotracheal or tracheostomy tube. There is no need to twist the catheter or patient. The dual plane, patented curvature of the catheter assures consistent entry into the left main-stem bronchus. The time savings and reduced patient trauma provided by the Bronchitrac "L" makes it the obvious choice for difficult left-bronchial suctionings.

- Ideal for suctioning of post-cardiac surgical, neuro and critical care patients
- Can be used for deep-lobe suctioning
- Completely latex-free product

These catheters are not recommended for right bronchial suctioning.

### Ordering Information

#### Bronchitrac "L" Set
