

## **COMPANY QUALITY POLICY**

The strategic direction of Apex Machining services is to supply class-leading products and services to our customers in order to sustain growth in both revenue and profitability.

We recognise that the continued future success of Apex Machining depends on the price, delivery and quality of the products and services we provide. The quality of our products and services must therefore be of the highest possible standard if we are to meet the ever-increasing demands of our customers. To this end, we intend to provide products and service that meet or surpass our customers' requirements.

In addition to these customer standards, it is our objective to run our business to a Quality Management System that is compliant to requirements of ISO 9001:2015 and any applicable legislation. We will remain certified to that standard and will strive to continually improve the Quality Management System.

Apex Machining Services will ensure that this quality policy is understood, implemented and maintained at all levels within our organisation and effectively communicated externally. All employees are required to conform to the requirements of the Quality Management System.

Quality objectives relevant to the operation of the Quality Management system will be set and reviewed regularly to help drive the continual improvement of the System. This in turn will drive continual improvement of the products and services we offer - and develop and improve our business.
