

# Save money and protect your assets with MOPAC's Cool Roof Solutions!

Installation in the Winter or Spring will ensure you lower your cooling costs during the **HOT** months of Summer. Cool roofs reflect solar radiation back into the atmosphere (reflectance) and help the roof release trapped heat (emittance). This results in a cooler building and reduces overall energy use.

Reduced energy use correlates to less demand on power plants and fewer emissions. The roof and its insulation last longer thanks to a decrease in temperature extremes and expansion/contraction cycles. This saves you money in the long-term and reduces landfill waste.

## Reduce Cooling Bills by 10 - 30%

ENERGY STAR® qualified TPO, PVC and White

EPDM roofing systems can lower your rooftop temperature by up to 70° and provide significant savings on your energy bill. Our Energy Appraisal can demonstrate the potential savings.

## An independent, single source for roofing solutions

MOPAC is a specialist in performing roof installation, maintenance and restoration with over 34 years of experience. We consult, install, and manage the repair, restoration and replacement of all types of commercial and industrial roofing systems.

MOPAC's comprehensive roof reliability services eliminate the headaches associated with roofs and allow building owners, facility and property managers to extend life-cycles and lower the costs associated with roof maintenance and loss of energy.

### Repair and Installation

- Roof coatings for energy conservation
- Preservation to extend life-cycles
- Leak detection and abatement
- Restoration of existing roofing systems
- Replacement (tear-off), when necessary

### Consulting and Management

- Roof Program Development and Analysis
  - Inspection, Condition Assessments and Analysis
  - Layouts, Photos and Infrared Images
  - Value-Added Recommendations and Budgets
- Roof Reliability with **Long-Term Warranties**
