

Ecological Landscape Design

Darwin Ecology design and implement **specialist ecological landscaping** schemes which frequently incorporate wetland habitat areas due to the wide range of both aquatic and terrestrial species that wetlands support.

Since 2009 we have worked on a number of schemes, including riverbank restoration, wildlife pond and wetland creation for commercial clients.

The Darwin Ecology habitat team are comprised of well qualified, ecological landscaping specialists, all of whom have ecological training and fully understand the scientific theory behind our ecological enhancement schemes.

We love what we do and enjoy the challenge of creating high quality **wildscaped habitats** which incorporate a multitude of niches for wildlife.

DARWIN ECOLOGY
integrating nature conservation

Elegant Wildscapes

Aesthetics are essential as this helps people to engage with the scheme and can change their perception of a scheme from untidy wasteland to **wildlife haven**. There is a fine line between an elegant naturalised planting scheme and an overgrown mess. We know which side of this line you want to be on.

Bold deadwood habitat piles and rock piles are frequent features in our work. These features work twofold in creating some **fantastic ecological niches** and refuges to quickly attract a wider range of amphibians, reptiles and small mammals and secondly they look great!

For larger schemes we always employ landscape architects to ensure our designs integrate beautifully with the hard and soft environment.

The Creationists

Our team is unique; it is comprised of **trained ecologists** all of whom also hold **specialisms in habitat creation works** and we are skilled both working with, or modifying the natural form of the site and adapting the plan to ensure we leave behind a scheme that creates the **right conditions** and range of areas for the species or habitats we are targeting.

The team has the combined experience to undertake any practical **species mitigation, habitat creation or habitat management** as a result of our additional **landscaping and construction** backgrounds. Together we can offer complete range of on-site services for bespoke projects carried out with minimum disruption and to the highest standards.
