## British MINNOW-FISH Carburettors

Brit. Pats. Nos. 1,126,441 & 1,126,442

During the last ten years as U.K. Concessionaires for the American designed Fish Carburettor this Company has been working continuously on a vastly improved British version which is more accurately metered and able to cope with a wide range of modern high revving engines without loss of flexibility or at the expense of increased fuel consumption. The Fish carburettor was originally designed by J. R. Fish thirty odd years ago and was based on the principle that better vapourisation and hence greater all-round efficiency can be obtained if the fuel is introduced into the air stream through a number of holes in the throttle butterfly. The Fish Carburettor was intended for small throttle openings on large American engines running at low revs. Modern high efficiency engines of the British and European type call for wider throttle openings feeding much smaller cylinders at much higher revs—in fact almost the exact opposite of the original American requirements. It is to these much more extensive modern needs that the New MINNOW Carburettor has been produced using the well-proved principles of vapourisation originated by Fish.

These MINNOW carburettors have been in production for some time now and are fully available for home and export markets (including North America!) as simple replacements for original equipment and will be sold under the REGD. Trade Marks

or MINNOW

Our associates in Canada, FISH CANADIAN CARBURETTORS say in their catalogue of our MINNOW Carburettors:

"The unbeatable MINNOW Carb. It always was hard to beat a Fish carburettor equipped car, foreign or domestic. Now it is impossible even with conversions costing 2-3 times the price of a MINNOW Carb. You cannot beat it price-wise, performance-wise, economy-wise. Reason: A ~~completely new design specially for the smaller engine British and European car. Not a watered down version of the original large displacement American model.~~ Properly proportioned, accurately metered and hand machined by European craftsmen, it delivers all the superior performance possible only with the famous Fish principles. This is a great deal more than can be had from run of the mill mixers of orthodox design and made by automated mass production methods. The supply to the American market is limited. Place your order now with Fish Canadian Carburettors, etc. etc."

Some independently obtained test results on the latest MINNOW Carb.

VW 1200			Vauxhall Viva		
	std.	MINNOW		std.	MINNOW
0-60	26	18	0-60	21	15
