

Care & Cleaning Tips for Cultured Granite, Marble & Stone

The products we manufacture are durable and long lasting. The following recommendations and cleaning tips are guidelines to use when cleaning your North Coast product:

- We strongly recommend using non-abrasive cleaners such as "Formula 409 Natural Stone Cleaner" or other non-abrasive anti-bacterial cleaners.
- To keep the "as new" shine and beauty of the high gloss finish, using car wax and polishes or a product such as TR "Gel-Gloss" is recommended on a periodic basis.
- We recommend that you keep your hot water temperature under 150°F. [Learn more...](#)
- Tape and sticky residue can be removed by simply using Goo-Gone products.
- Hard water stains can occur on any surface over a long period of time. If these occur, they can be removed with a mild vinegar and water mix followed by the use of one of the products above to maintain the shine.

At North Coast Cultured Products, we manufacture our products to the highest quality and durability. Our products require a minimal amount of care to give our customers many years of satisfaction that they own a product manufacture with pride in the USA.
