# HICKS BEEF BULL SALE

**WEDNESDAY 6th SEPTEMBER 2017**

**Sale starts: 1:00pm.**

**Inspection from: 10:30am.**

**'Annandale South' Holbrook**

**THE HYBRID ADVANTAGE**

**70 BULLS**

**56 AUSTRALIAN BEEF COMPOSITE BULLS**

**14 HICKS RED ANGUS BULLS**

**Andrew Hicks**

Ph: 02 6036 2538

Mob: 0427 147 258

**Tom Hicks**

Ph: 02 6036 2528

Mob: 0448 796 124

**Email:** aahicks@bigpond.com

**Visit our website for link to video of sale bulls**

**Website:** www.hicksbeef.com.au

**This sale is interfaced with AuctionsPlus**

Our sale is conducted live on line in real time; remote bidders can bid on computers at their location. The remote bid is immediately transferred to the auction ring.

**Bidding is only available to registered AuctionsPlus users**

You must register at least 24 hours prior to sale with AuctionsPlus

**Phone: 02 9262 4222      www.auctionsplus.com.au**

**Phil Gledhill  
Jim Bruce**

**0407 078 094  
0419 600 355**

***2% rebate to  
outside agents***

**We have poor mobile phone reception at our sale ring.  
Please call Phil or Jim from Elders to organise phone bidding.**

# RED ANGUS GROUP BREEDPLAN

## ESTIMATED BREEDING VALUES (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait.

### ACCURACY:

Accuracy is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait.

**Gestation Length EBV** (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV** (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV** (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV** (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV** (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV** (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV** (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV** (cm) This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Carcase Weight EBV** (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

**Eye Muscle Area EBV** (sq cm) This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

**Rib Fat and Rump Fat EBVs** (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV** (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV** (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

**For further information please contact the Red Angus Society or Red Angus BREEDPLAN.**

# Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

**HICKS BEEF STRUCTURAL PROGRAM:** Since 2003 Hicks Beef have used the services of BEEFXCEL to assess the structure of all sale bulls. The SPRING 2017, HICKS BEEF Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Hicks Beef sale bulls were assessed by **Liam Cardile** of BEEFXCEL on 08/08/2017. The composite bulls scrotal circumference measurement was taken on 08/08/2017.

## How to Use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system;

- A score of **5** is ideal (Note: Except for Temperament where a Score of 1 is ideal);
- A score of **4 or 6** shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of **2 or 8** are low scoring animals and should be looked at closely before purchasing;
- A score of **1 or 9** should not be catalogued and are considered culls.

**Liam Cardile** on 0409 572 570

# Multi-Breed Estimated Progeny Difference Figures

Since starting our Australian Beef Composite program we have been frustrated by not being able to use figures to describe our cattle to clients, or to use them to increase genetic improvement in our own breeding program.

Why has it taken so long? Unfortunately Australian Breedplan figures are owned by their respective breeds, and there is no common base between breeds. Different breeds' figures sit quite separately to each other.

Fortunately the US Simmental Association has solved all our problems with their true multi breed EPDs.

## **BENEFITS OF EPDS**

### **HUGE VOLUME OF DATA**

- 11.5 million head recorded
- 300,000 + animals recorded annually
- Plus 11 million American Angus EPDs incorporated into the database
- Largest multi breed data base in the world

### **TRUE MULTI BREED DATABASE**

Figures directly compare all participating breeds. The Australian multi breed figures start with a base breed, all new breeds are brought in without any adjustment for their own breed figures. The US Simmental Multi Breed EPDS run

- American Simmental
- American Red Angus
- American & Canadian Gelbvieh
- American Maine Anjou
- Canadian Angus
- Canadian Red Angus
- Canadian Simmental
- Incorporates American Angus data
- It also brings in Australian figures indexed into the US system

### **TOP QUALITY DATA**

- With the large volume of data, there are better links between sires, 35,000 matings
- Progeny tests of over 5,000 carcasses
- 500 sires progeny tested, 60 – 70 tested per annum

### **DNA ENHANCED EPD CAPABILITY**

- In 2012 the American Simmental Association introduced a highly effective 50K DNA test
- This increases the accuracy of EPDs

### **OUR COMMENTS ON THE US FIGURES**

The US figures are a god send to our breeding program. We are now part of one of the world's largest data banks in our industry. It enables clients to more exactly match the bull to the program.

## ANY RESERVATIONS?

Initially these figures have been incorporated into the US system, with only a few years of our data bank from over 18 years of collecting data. It was considered too labour intensive to include too much back data.

We are happy with how it ranks our sale bulls. Possibly some of our home bred sires without the depth of records are slightly below where we think they should sit (possibly all breeders think this).

We are sure that with more years of data input, this will be solved.

Currently we are using as many bulls linked to the US figures as we can, to improve links and accuracy.

If this year's figures are a good indicator of our bulls performance, the following years will just get better.

## 2017 MULTI-BREED PERCENTILE TABLE

# HICKS BEEF GENETIC TRENDS

HICKS BEEF: ALL PURPOSE INDEX

HICKS BEEF: TERMINAL INDEX

HICKS BEEF: BIRTH WEIGHT

HICKS BEEF: CALVING EASE

Our new calf catcher in action, making the weighing and tagging of our Spring 2017 calf crop much easier and safer. A lot of work goes into collecting performance data that is accurate and reliable.

Thanks to the team at Holbrook Engineering who did a great job building this calf catcher for us. Local engineering at its best.

## Vet Check Information

All bulls presented in the auction have been fertility tested by the Holbrook Veterinary Centre. They have passed an examination of their reproductive tract, which includes a testicular palpation, internal reproductive organ palpation and penis check. General health and structure are part of the course for this veterinary examination. Service ability testing and semen assessment have not been performed and we encourage all purchases to integrate their new bulls into the risk mitigation strategy that they employ back home.

## High Roughage Diet

Producing bulls in optimum condition for their first joining season has got to be our first priority.

Yes we want them to look well for photos and sale presentation, but they must be able to go out and work.

This year we have tried to keep our bulls on steady weight gain on grass throughout their entire lives, with just a high roughage silage based ration to keep them going through the winter.

# GUIDE TO EPDS

## MM

MATERNAL MILK

## API

ALL PURPOSE INDEX

(Dollars per cow exposed in a self replacing herd bred to both angus heifers and mature cows. Great economic index based on production system)

## CE

CALVING EASE

- 300,000 + animals recorded annually
- 500 sires progeny tested (now 60-70 per year)
- 35,000 mating on angus heifers (progeny tested)

## BW

BIRTH WEIGHT

## YG

YIELD GRADE

(Lower ranks higher on the percentile table)

## TI

TERMINAL INDEX

(Dollars per cow exposed under a Terminal sire scenario)

(Based on actual marbling scores)

## BF

BACK FAT  
(Lower ranks higher on percentile table)

## REA

RIB EYE AREA

- 30 - 35,000 carcass scans per year
- 5,000 progeny test carcass recorded

## HYBRID VIGOUR AND SELECTION FOR ECONOMIC TRAITS

The Hicks Beef bull sales give beef producers the opportunity to use science to increase their profits with the benefits of a breeding program using both hybrid vigour and genetic selection for performance based on the world's largest multi-breed database.

The benefits of measuring economic traits and using the US multi-breed figures has allowed us to put a total economic package together. High growth rates are little use if it comes at the cost of fewer live calves. Calving ease has always got to be in the equation with growth. The good news is that there is now a significant selection of bulls that bend the growth curve. That is, identify bulls that give both moderate birth weights and high yearling weights. Using the world's largest data bank of the US multi-breed figures, we can target the bulls that do both.

There is also a need to reduce mature cow weight. In a world where you get paid for beef production per hectare it is important to keep cow efficiency at its maximum.

The success of Hicks Beef in carcase competitions has been achieved by a rigorous selection for top ultra sound carcase traits. The balance to be maintained is selection for rib eye area combined with marbling and adequate fat cover. Again, through the use of the world's largest data bank, and scanning over 1000 calves every year, we can measure our annual improvement in these important economic traits.

Hybrid vigour is recognised by beef scientists as the only way to rapidly improve female fertility. The estimates of the advantage of using hybrid females is 23% more weaning weight per cow exposed to bulls at joining.

We offer both red and black Australian Beef Composites to suit the different requirements of clients. We believe that the red coat colour is better suited to a hot climate. But in a world where black cattle gain a premium, who can argue?

**RENNYLEA C490**  
RENNYLEA W449

This is a bull that combines 2 great performance herds. His dam was the number 1 marbling Angus cow in Australia, from the great W449 cow that has been the cornerstone of the Rennylea program. Sired by the U.S. bull GAR Ingenuity, from one of the world's leading performance herds. The U.S. multi breed figures rank him up the top of the breed for muscle and marbling. J138 was the record priced Rennylea bull, bought for \$17,500. His multi breed figures show him in the top 4% for weaning and top 3% for yearling plus he has great carcass numbers.

# BLACK COMPOSITE BULLS

## Lot 7 ABC L618

Born: 7/08/15

Brand: L618

Colour: BLACK

GW PREMIUM BEEF 021TS  
**GW WOLFPACK 712A**  
GW MISS GPRD 217X

WEBB RIGHT ON F545 ET  
**ABC J821**  
ABC D999

This is a special Wolf Pack son that presents with top 1% All Purpose Index and top 3% Terminal Index. The great thing about profit indexes is that it puts real values in for measurable traits, and shows profit not only relies on growth, but fertility traits of calving ease, stayability (a cow's ability to stay in the herd) and mature cow weight etc. This bull is stacked with profitable cattle from his high indexing sire and great mother. He displays depth of body and softness and has beautiful structural assessment scores.

 CDI MS TOP GUN 5U  
  
 HICKS CHEROKEE Z555  
**HICKS F148**  
 HICKS Z632RA

Here is a tall, square growth bull. He is one of the heavy bulls at the time of cataloguing. He should transmit this weight to his progeny, with his strong weaning and yearling figures. His carcass numbers show good marbling and top 15% for higher back fat. We suggest this growth bull to be used only on mature polled cows, as he does carry a horned gene.

PURE-POWER  
**ABC J998**  
ABC F1362

L697 is sired by the \$91,000 Te Mania Emperor Angus bull. We believe the best way to breed the best composite cattle is to use the best pure bred inputs. In the Angus Breedplan figures this bull is a trait leader for daughter's calving ease, 200 day, 400 day and 600 day weights, days to calving, IMF and all Indexes. These economic traits are all stacked into this attractive young sire, from a Gelbvieh bred female.

GW MISS LUCKY CHARM 410P

DLW WARDON 24W OF 408

**ABC J1135**  
ABC E1062

This is an outstanding Premium Beef son; moderate, heavy, and good figures. Premium Beef is probably one of the most popular Sim Angus bulls in the U.S. This bull from a Balancer heifer combines calving ease with growth and carcass. He stacks a lot of weight into a moderate frame, a real modern beef bull. This is completed by his genetic tests showing he will only sire polled black calves.

**RENNYLEA J138**  
RENNYLEA C490

ES BLACK LEGEND PK 26

**ABC H1081**  
ABC A1181

We know our new record priced sire, Rennylea J138, has his supporters with his unique pedigree that combines some world class genetics. His U.S. figures show him to have better than average calving, with top 10% weaning and yearling, but it is marbling where he shines. He is in the top 1% of the figures, the value for 1% is 0.87 and J138 sits at 1.46. Well above the top 1%. This young bull, like his sire is top 1% for marbling, moderate for calving ease, with good profit numbers. Should add thickness to his progeny, and is tested homozygous polled and black.

## Hicks Beef Bulls Checklist

- ✓ **Moderate Birth** – we aim to have birth weights lighter than breed average
- ✓ **Specialist Heifer Bulls** – in all our breeds, top 20% calving ease
- ✓ **Weight Gains** – up in the top 20% of breed for 200 & 400 day weights
- ✓ **Mature Weights Less** than breed average, large cows need more maintenance
- ✓ **Carcase** – we believe muscle and yield will be demanded by industry and that marbling is an important trait
- ✓ **Temperament** – is important, we cull heavily on temperament, sale bulls and cows

- ✓ **Structurally Correct** – we feel that we are competent enough to structurally assess bulls, but we know you want an independent professional. We use Liam Cardile from CTC to assess all our sale bulls for feet, legs, sheath and testicles
- ✓ **Tested** – for known genetic abnormalities, results will be available on sale day.
- ✓ **Tested negative** – Pesti-virus carriers.

# RED ANGUS BULLS

## Lot 57 HICKS REDEMPTION L10

Born: 29/07/15

Tattoo: L10

Unreg: HRAL10

BECKTON NEBULA P P707  
**BROWN JYJ REDEMPTION**  
JYJ MS JOLENE W16

HICKS ADA E565  
**HICKS RED PATRICIA J831**  
HICKS BLACK PATRICIA E552

Before we start, this exceptional bull, although on the register for performance, he is unregistered. He is one of the most complete bulls we have offered and we have used him last Spring in our own herd on heifers. He has been a standout since weaning, and is one of the few bulls to rank in the top 10% for calving ease, top 1% for 400 day, top 1% for carcass weight. His Supermarket Index places him the top bull of the breed; at 63 this is well above the average of 33. He is a heavy bull with a lot of depth and volume, and holds his condition even during joining. His pedigree reflects the combination of one of the most popular bulls in the U.S., Redemption, with one of our most proven sires Hicks Ada E565 (Split Ear). His dam J831 is one of the best.

ANDRAS IN FOCUS B152  
**ANDRAS NEW DIRECTION R240**  
ANDRAS KURUBA B111

TE MANIA DAIQUIRI D19  
**TE MANIA MITTAGONG F801**  
TE MANIA MITTAGONG Z288

This is our first son of Andras New Direction. We saw the photos of this sire and became interested, and when we saw his outcross pedigree and solid numbers we became very interested. L99 offers a very outcross, totally black pedigree, although both parents are red in colour. Their genetics represent the best of the Angus breed and come from red carriers in the breed. L99 is a very good bull, his Te Mania dam is one of our best. He has moderate birth and heifer calving ease, good growth and very good carcass data. Red bulls can only have red calves to red cows.

This is a bull that is back to the future. He is an embryo transfer calf that has been on ice for 10 years. He represents an elite mating from a very good U.S. sire from a cow we purchased from Te Mania. A black cow that carried a red gene. She was flushed at Te Mania and is present in some of their sire lines. This bull had brothers that sold for high prices in our sale 9 years ago. His numbers show a bull that would be suitable for heifers.

# Sale Details

**SALE DETAILS:** All bulls will be yarded by 10.30am on the morning of the sale. Inspections prior to the sale can be arranged by calling Andrew Hicks on (02) 6036 2538.

**HEALTH:** All bulls have been vaccinated with "7 in 1" which includes leptospirosis. They have been drenched with Evermectin. All bulls vaccinated - vibrio, and pesti virus tested.

**DELIVERY:** Stock awaiting delivery will be held free of charge for up to 14 days of the sale at the buyer's risk.  
**CATERING:** Lunch and refreshments will be available.

**GUARANTEE:** We have always provided full replacement guarantee against fertility and genetic faults. It is important that we are contacted as soon as possible to rectify any problem.

**FEEDING POLICY:** We believe that overfeeding can cause many problems to bulls long and short term. All our cattle are run in large paddocks under commercial cattle conditions. All Breedplan figures are assessed under these conditions usually from mobs of over 100 cows and calves.

As we sell our bulls younger than most studs we feel it is important that they are in suitable condition to withstand the rigours of their first season. The bulls are given a supplementary ration for 10 weeks, out in the paddock still in their calving groups.

All bulls are treated identically with no preferential treatment for the top bulls. We have sold bulls to many areas of Australia and have had no complaints about their mobility or fertility.

**ACCOMMODATION:** Holbrook has several motels, please call Andrew to make a reservation for you.

## Terms and Conditions of Sale

1. Subject to reserve prices, the highest bidder shall be the purchaser, and in the event of any dispute arising it shall be settled by the Auctioneer, unless one of the claimants will advance the bidding above the disputed bid, in which case the lot or lots shall be put up again.
2. The purchaser shall deposit the whole or any part of the purchase money if required at any time during the sale.
3. All stock shall be paid for in cash immediately on conclusion of sale, and prior to delivery, but, in the event of delivery being made, or possession obtained by the purchaser or his representative prior to the payment of the purchase money, or any cheque given on account of same, the purchaser shall hold the stock as trustee only for the vendor.
4. All stock shall be at the risk of the purchaser upon the fall of the hammer.
5. No warranty is given by the Auctioneers with any lot, and, as all lots are available for inspection previous to the commencement of the sale, the same are sold with all faults, if any.

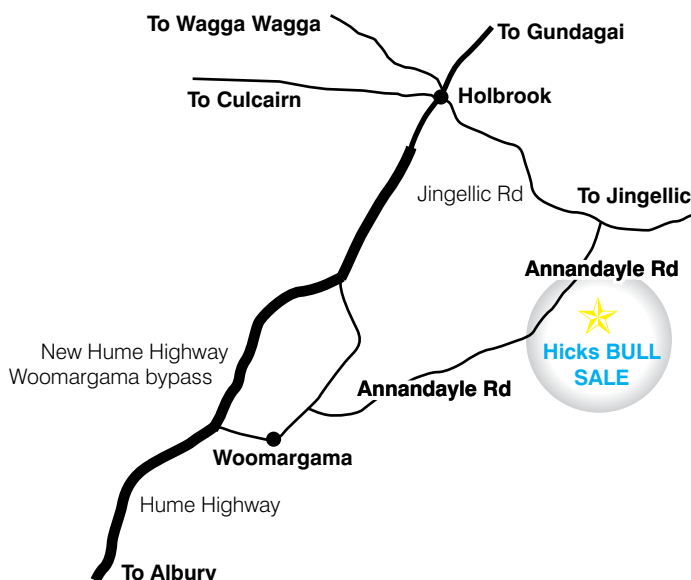

The Auctioneers shall not be responsible for any errors or omissions in any particular appearing in the description or pedigrees of any lot for sale, and no error, omission, or misdescription in such particulars or pedigrees shall invalidate the sale or be made the subject of any claim for compensation.

### Directions from the South

Take the Woomargama exit to the Old Hume Highway. If you miss this exit, turn right at the Holden dealers in Holbrook.

### Directions from the North

From Holbrook turn east down the Jingellic Road, travel 8.1kms then turn right into Annandayle Road and we are 2.8kms on the left.
