

Factories & Warehouses

Page 1/3

Many of our customers are national companies consisting of retail premises and warehouses. They rely on us for advice on preventative measures as well as calling on us when emergencies occur.

Some of the services we offer:

- **ROLLER SHUTTERS:** These are either manual or electric, bespoke made to fit warehouses, shop fronts and windows, trade entrances and offices.
There are also additional locks that can be fitted onto shutters to increase their security.
All steel work can be powder coated to any RAL or BS number.
- **RAM RAID PROTECTION:**
Ram raiding is normally the use of a van/truck/heavy plant being used to force open shutters, gates and large entrance doors.
We have 3 main ram raid solutions:
Ram raid gates: These are heavy duty gates and posts fitted in front of roller shutters that are designed to withstand attack from a vehicle. These are normally locked with high security padlocks or mortice locks. They are swung out of the way for access during the day.
Ram raid posts: These are bollards that are sunk into the ground at approximately 1 meter wide spacing. They are unlocked and manually lowered into the ground for access during the day and then manually raised and locked for night-time security. They do not hinder pedestrians walking through the gaps, so they are ideally suited for external parking areas, for example car showroom for courts.
Fixed barriers and posts: These are normally Armco motorway crash barrier installed around the perimeter of a site to prevent vehicles gaining access through bushes and grassed areas etc. Fixed steel bollards are also available to prevent vehicle access but still allows free access for pedestrians.
- **BARRIERS & PARKING POSTS:**
Barriers:
These are usually installed to car parks and areas where automatic gates are not suitable. They control vehicles but not pedestrians.
They can be manual or electric and interfaced with a access control system.
Parking Posts:
These are used for reserving parking bays in commercial and residential applications and can be either removable, drop down or fold down. They can either have an integral lock or padlock.

- **STEEL AND METAL DOORS:**

We manufacture high security steel door sets that are used on warehouses, government installations, offices, shops and cash offices.

There are 3 main types:

Fire Exit Doors: These are normally fitted with EN1125 or EN179 Exit devices as well as additional mortice locks that can be connected into the building burglar alarm to ensure they conform to fire regulations as well as offering a high security solution.

Entrance Doors: These can be fitted with various types of mortice latch, mortice deadlock and manual digital locks.

Access Control Doors: These can be fitted with various types of electronic lock depending on application.

All of the above can be fitted with additional ironmongery, push/pull handles, door closers and spy holes etc.

All doors are powder coated to your specific RAL or BS numbers.

- **GATES, GRILLES AND RAILINGS**

All gates and grilles are designed and made to measure.

Collapsible Gates: These are concertina gates that fit inside the window, patio or door. They are fitted with locks but can be opened when the building is occupied. These are made from a high-grade steel ideal for high security applications and can have automatic locking deadlocks or high security hook locks.

Hinged Bar Gate: These are fitted in front of your main entrance door, rear doors or side ally ways. There are multiple locking options available to suit your individual application and are made from high grade steel.

Vehicle Entrance Gates: These can be either Wooden or Steel, are all made with your individual aesthetics in mind and can be either manual opening or automated. These can also be integrated with Access Control, entry phone systems and CCTV.

Mesh Grilles: These are normally fitted internally to windows and vision panels on doors. They can be made on flat or angled frames and be screw or bolt fix. They can be made with various styles of mesh infill.

Bar Grilles: These are normally fitted internally or externally to windows to offer a higher degree of security. They are made from square or round bar and can be made on various styles of frames and stand offs. These would be bolted due to the extra weight.

Railings: These can be fitted on walls, balconies and steps. They are bespoke made to our client's individual needs.

All steel work can be powder coated to any RAL or BS number.

- **SAFES**

Safes are graded by “Cash Cover” this means that the construction and security of the safe determines the contents value that an insurance company will cover, if you have contents insurance.

These range from £ 1000 to £ 10,000 in stock and any higher cover needed is by order. We stock safes with a deposit facility so that staff can securely store money without the need for them to hold a key.

Some safes also have the added advantage of fire protection.

Fire protection wallets are also available, if you wish to put these into a non fire protected safe.

Do you need an extra safe key? Have you snapped your key? Have you forgotten your combination?

We can re-key & replace safe locks, change combinations and open them if keys are lost.

If you have staff leave that had access to the safe, we recommend that you change the key or combination.

- **PANIC HARDWARE FOR FIRE EXITS:**

We can supply and install various locking systems for fire exit doors, it is a legal requirement that you have the correct panic hardware fitted depending on who uses the building:

Members of the public and Staff: Exit hardware needs to conform to EN1125 this is so that untrained users can escape from the building in an emergency with no prior training on how to operate the exit door.

Staff only: Exit hardware needs to conform to EN179 this is for trained users who know how to operate the exit door.

- **LOCKS:**

We stock a full range of products ranging from a basic rim Nightlatch to high security locking systems.

We supply and fit locks to Wooden, Metal and UPVC windows and doors as well as Digital Locks, locks for Gates, Roller shutters and Safes.

For additional information on the above please see products and services section.
