

HOW TO DESIGN YOUR JUNGLE GYM PLAY CENTRE

First of all, **measure the area** you have available in your garden.

The base for the Jungle Gym needs to be **flat and level**, and ideally should be grass, or with safety surface. **Nothing hard** like stone, paving slabs, concrete, tarmac, patios or decking.

You will need **free space around the tower/s, swings and slide**, called safety area, so children don't hit anything hard if they fall off the equipment. This needs to be **1.5 - 2.0m** around the tower/modules **and 2.00m** in front of the slide, and 2.25m in front of the swing legs. You need to provide for this space when you are planning your play area for it to be safe. See diagrams below.

Check the tower's dimensions, there are **2 platform heights: 1.25m and 1.45m, and 2 lengths of slides, not interchangeable**. The lower platform has a short slide and the higher platform has a longer slide. You cannot put a short slide on a 1.45m or a long slide on a 1.25m platform. On our prices, the slide is also included, but it can be taken out and replaced by the fireman's pole. There is a "no slide" option on every tower. You will need to either enclose the entrance or fit another module on it, otherwise it will be dangerous. Please note that this might not be in the standard instructions.

There is a great range of towers, modules and accessories to choose from. PLEASE NOTE that **some towers can have more than one module at the time**, but the JG playground planner won't show that, **that is why we are here to help!**

The swing module comes with 2 flat swing seats included, but can take any of the accessories within the range if you want a baby seat or ring trapeze etc. The hooks have a bolt at the end making it easy to exchange seats.

The climb module also comes with a swing seat but can be exchanged for a baby seat or any other swing accessory. You need to buy any other accessories separately, the same as with the swing module.

The boat module needs 2 sides of a tower, so it is more difficult to combine with other modules or with a 2 tower combo, but we have done an extended boat module combination that is very popular!

The bridge, train and boat modules are more challenging to build than the swing or climb module.

Some towers (especially the bigger ones) already come with some accessories such as steering wheel, staroscope, peekoscope or even Bucket module, please check the item description to see what is already included.

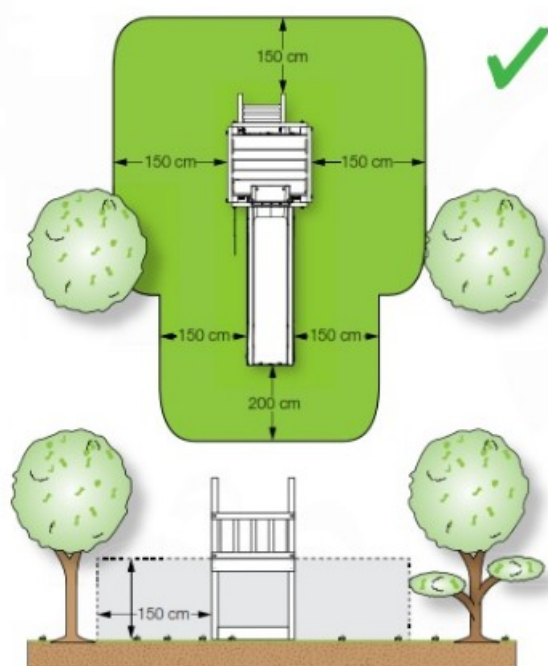

The Jungle Gym range is designed as a DIY job. The timber we supply is cut to size, but there will be a small amount of cutting to do while installing. The timber is pressure treated and requires no further treatment unless you wished to change the colour.

WE CAN PROVIDE PROFESSIONAL INSTALLATION SERVICE IF REQUIRED.

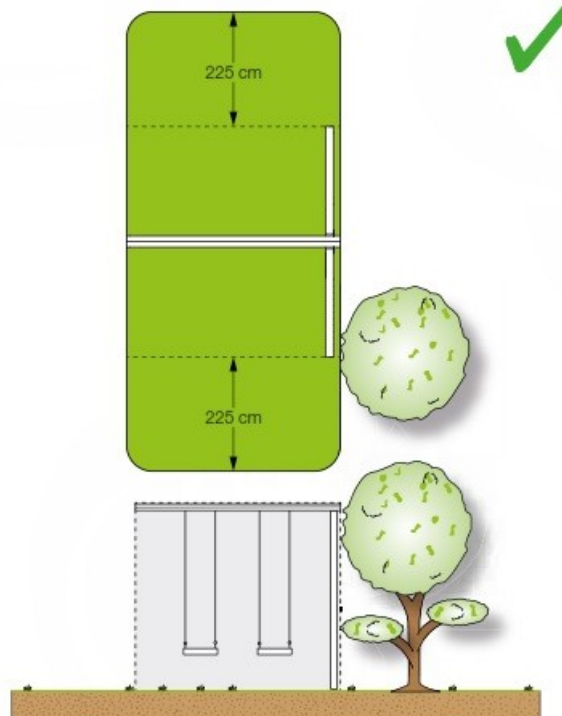

Please have a look at the JUNGLE GYM INFORMATION PAGE on our website for further details.

HOW TO PLAN YOUR PLAY AREA:

Correct positioning for climbing frames

Safety area for swings

PLAYHOUSE MODULE:

The Playhouse module is very popular, as it turns the bottom part of the tower (from the platform down) into a playhouse by enclosing it with tongue and groove timber. It also supplies plastic shutters for one window and a door.

This module can be added to all the towers, but not to the playhouses on frames. It doubles up the play space on the towers, without taking any more space in your garden. Ideal for when you have toddlers that cannot yet access the top platform.

PLAYHOUSES:

The range of Grow with me playhouses is designed to start using the playhouse at ground level, for toddlers, and then place it on a platform when the children are 3+ yrs. You can also buy the playhouse on the platform directly, in that case you will receive instructions to build the frame and the playhouse separately, and then it will explain how to join them together. On the Playhouse Xtra Large, there will be some timber to change on the roof of the playhouse, so the construction is more complicated. Again, **we supply a professional installation service if required.**

The Playhouses cannot be combined with as many modules as the rest of the towers. They can be combined with swing and climb module, and only the Xtra Large playhouse can be combined also with the bridge module.
