## TOTAL CONNECT

Ask About Total Connect 2.0 - Many of our customers have the option of using the Total Connect application which allows you to access your alarm system with your smart phone or an internet browser. Total Connect allows you to view the status of your system, if it is armed or disarmed, receive text messages regarding signals, view open and close reports, change codes, as well as many other exciting features. If your system isn't compatible, you can always upgrade! Call (530) 243-2521 and ask about it, today! Stuart or James are always available to do a free, no pressure estimate. You will be pleasantly surprised how easily affordable this service is.

## SECURITY SYSTEM CHECK-UP

When is the last time you gave your security system a little TLC? While doing your spring cleaning, keep a list of items that require maintenance. For example, have you been ignoring that low battery warning on the keypad? When was the last time your smoke detector was cleaned and tested? Have you dusted and removed spider webs from around the infrared sensors? Have you tested your system to make sure all the device are operating properly? Preventative maintenance goes a long way in keeping your system running at optimum efficiency for years to come. We are here to help. Call us today to schedule a system inspection (530) 243-2521. Depending on your plan, the inspection may be free!

## WE LOVE REFERRALS!!

If you refer a friend, co-worker, or family member, and they have us install an alarm or take over monitoring on an existing system, we will apply a \$50.00 referral credit to your account. **Be sure to have the future customer mention your name so we can get that referral credit applied properly.**

## VIDEO SURVEILLANCE MONITORING

We have had exciting success with our new video surveillance system monitoring . We are now able to monitor your video surveillance system at our central monitoring station. Last month two arrests were made after viewing actual burglaries in progress and dispatching police while viewing the burglars live. It makes prosecution easier and keeps false alarms down as we can verify that there is a burglary in progress versus a cat waling through a perimeter beam, etc.

Our technicians will design a surveillance system customized to meet your specific needs. These systems are easily expandable, so if you want to start out with one or two cameras, you can always add to the system at a later date. Again, all of our estimates are free. We are happy to demo and show you live and recorded video from actual sites.
