SECTION I. GENERAL INFORMATION

INTRODUCTION

About East Texas Council of Governments
East Texas Council of Governments (ETCOG) was organized under state law for the purpose of orderly planning and development of the East Texas Region. Currently ETCOG serves a 14-county area including Anderson, Camp, Cherokee, Gregg, Harrison, Henderson, Marion, Panola, Rains, Rusk, Smith, Upshur, Van Zandt and Wood Counties and its member Governments are comprised of counties, cities, school districts and special purpose districts. ETCOG assists local governments in planning for common needs, cooperating for mutual benefit and coordinating sound regional development. Either directly or through contractors, ETCOG provides programs and services for East Texas seniors, employers and job seekers. ETCOG also builds the 9-1-1 emergency call delivery system, provides peace officer training and homeland security planning services; and delivers rural transportation services, business finance programs, grant writing services and environmental grant funding for the region.

PURPOSE

ETCOG is seeking a qualified electrical contractor to perform an overhaul of the electrical system and make preparations for the installation of a standby generator at the property located at 3800 Stone Road in Kilgore, Texas. The need and scope for such work was determined by an electrical professional that was brought in to evaluate the electrical system. The results of the evaluation provided the necessary recommendations for repair upgrades or replacements in order to address staff safety and electrical needs.

PAYMENT TERMS

Payment terms are NET 30 upon receipt of invoice by email to a.p.@etcog.org, attention Accounts Payable, ETCOG Financial Services.

SECTION II. PROPOSAL INFORMATION

SCOPE OF WORK (SOW)

1. Install a single new 800 amp 208 volt 3-phase service to replace the existing 600 amp and 400-amp services, to allow for a single means of disconnecting the utility power from the building in an emergency and, as preparatory work, to allow for a simple means of adding a transfer switch for a permanent back-up generator (potentially 60kW) that will be procured by ETCOG at a later date.

2. Replace both of the existing main electrical panels and installing an electrical wire-way system around the room, to allow feeding of existing sub panels and distribution circuits without reworking conduits and eliminate feeding through panels, as is currently done.

3. Where plausible, remove the unnecessary sub-panels in the Supply Room and Conference Room area. The circuits in these panels should be moved to the panels that were feeding the sub-panel, allowing for less confusion in finding and labeling circuits. Proposer will need to trace and label all circuits inside new panel.

4. In preparation for a future permanent back-up generator, which again, will be procured at a later date, a 200-amp transfer switch will need to be installed along with a 200-amp emergency panel.
Note: no circuitry at this time will go into the emergency panel, as the areas that will need emergency power are still being identified. ETCOG has an IT server room with air conditioning that is not able to be shut down for an extended period of time. Therefore, before the electrical repairs are able to commence, the wiring for the room referenced will need to be reconfigured to run off a standby generator that will be supplied and maintained by the proposer during the scope of this project. Once the electrical repairs being procured by this RFP are completed, this wiring will then be utilized for a short-term 15-kilowatt propane generator ETCOG will be installing at a later date.

CURRENT OVERALL ELECTRICAL LOAD FOR THE BUILDING:

- 335 standard 120-volt receptacles
- (2) 20A 208v Receptacles
- 230 standard 120v T12 4 lamp light fixtures
- (4) 400w High Pressure Sodium Pole Lights @208v
- (8) 250w Metal Halide Wall Pack Lights @ 208v
- (16) 90w recessed can lights @ 120v
- (3) ¼ HP Exhaust Fans @ 120v
- (2) Mini-Split HVAC Units @ 208v
- (11) Roof Top HVAC Units of Various Sizes @ 208v 3 Phase

A total of 678 Amps of load was calculated for the building based on an equally balanced 208-volt 3 phase system.
