## Connecting Your PC Computer to a Secure Wi-Fi Network

On your computer, click the **network icon** in the notification area (at the lower-right corner of your screen).

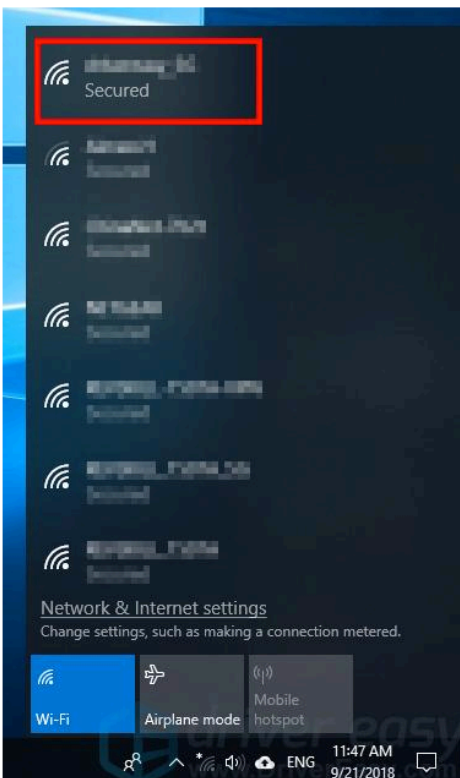

### Next:

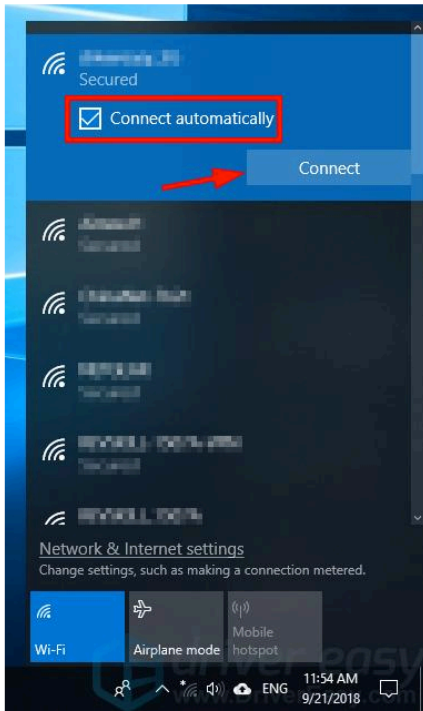

Click the network you're going to connect.

Choose the network by its **SSID** (the **name** of a network). If you don't know the name, check your router or ask the administrator of this network.

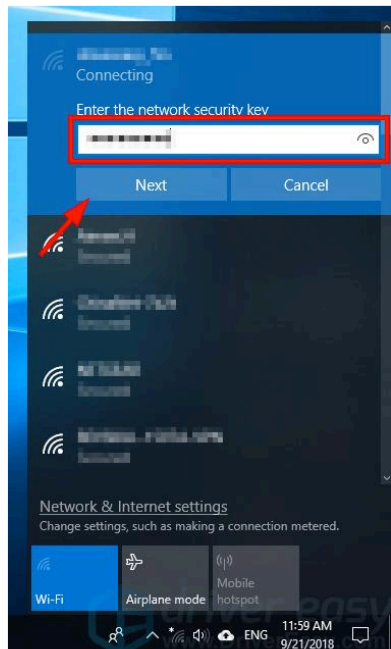

If you want to connect to this wireless network the next time you log in your computer, check **Connect automatically**. Then click **Connect**.

Enter the **password/security key** if this is required by the network.

**i** If you don't know the password/security key, check your router or ask the administrator of this network.

Check your **network icon** in the notification area to see if you're connected to the network. If it's showing the network signal strength (as the screenshot below), then your computer has connected to WiFi.
