

MULTIZONE 3000

HEATING MANIFOLD

Multizone 3000 . Multizone 3000 . Multizone 3000 . Multizone 3000 . Multizone 3000 .

A further development of the
proved "Multicompact 3000"

The flexible distribution manifold systems made of plastic for sanitary and heating

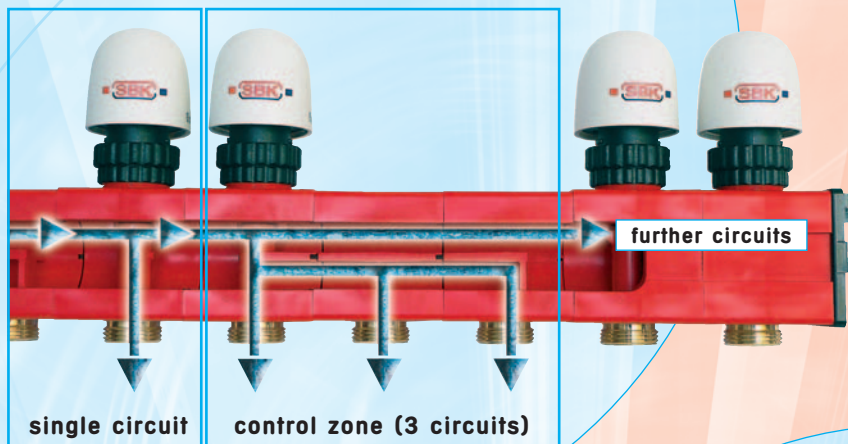

MULTIZONE 3000 HEATING MANIFOLD

The SBK-Multizone 3000 combines – due to modular system – 2 or 3 heating circuits to one control zone. The hydraulic alignment of the several heating circuits remains possible by the flowmeter in the return module. Your advantage: less material and installation effort because of omission of previous required installation components.

CONTROL ZONES

Water flow by the control with control zones

The SBK-Multizone 3000 has all proved abilities, advantages and quality characteristics of the Multicompact-program:

- Single segments made of fibreglass reinforced plastic, consequently corrosion and ageing resistant
- Self-insulating through integrated air chambers
- Temperature resistant from -20°C to +90°C

SEGMENTS

The zone function is based on 3 different segments

Triple zone

Double zone
