Opella 

THE ULTIMATE PLUMBING SOLUTION

Two great companies on their own are now even

BETTER TOGETHER

Visit fluidmasteruk.com and opella.co.uk

Fluidmaster® Has The Total Solution

A True Leader in the Industry

Fluidmaster®, the leading global supplier of fluid management solutions, is found in more toilets than all other brands combined. As the customer's first choice and preferred supplier of toilet tank trim, we have been ingeniously engineering the internal flushing mechanisms of toilets for more than half a century. Built on and inspired by an unsurpassed history of innovation, Fluidmaster® has become an icon in the plumbing industry. Our reputation for superior quality continues to grow as we cultivate and support partnerships around the world with retailers, wholesalers and toilet manufacturers, reaffirming the company as a leader in innovation and global supply of sanitaryware products.

Pioneering Innovation for More Than 50 Years

Our company's success began with the desire and drive of founder Adolf Schoepe. Convinced that existing toilet technology was inefficient and unreliable, he sought to create a more advanced fill valve that worked with, rather than against, water pressure. Mr. Schoepe's vision became a reality when he revolutionized the toilet care industry by successfully launching Fluidmaster's innovative pilot fill valve technology in 1957.

Comprehensive Line of Innovative Toilet Repair Products

The popularity of Fluidmaster® fill valves has supported our expansion into related product lines through the years. Today, Fluidmaster® markets more than 67 million toilet repair products annually and sells more toilet tank replacement valves than any other manufacturer in the world. In addition to the inaugural fill valve, our complete line of toilet repair parts includes flush valves, flappers, tank levers, dual flush valves, bowl wax, toilet repair kits and connectors. Fluidmaster® and Opella Ltd. proudly became one company in late 2011, adding some outstanding products made in the UK to our existing offerings and further supporting our dynamic global distribution network that covers almost 90 countries and more than 80% of the world's population.

The Toilet Repair Experts

FILL VALVES

The fill valve fills the toilet tank with water from the water supply line after it has been emptied by a flush. It replaces the ballcock and is more efficient and easy to install. Replacing an old ballcock fill valve helps to maximize toilet performance and save water. Choose from Fluidmaster® PRO, Torbeck® and Delchem® filling valves with a wide array of high performance features. Replace your old style ballcock valve with a better performing fill valve from Fluidmaster® and Opella.

The Toilet Repair Experts

FLUSH VALVES

Easy to install Flush valves and components from Fluidmaster®, Torbeck® and Delchem® control the release of the water from the tank into the toilet bowl once the tank lever or button has been pressed. Replacing flushing valves will help save water, can help stop leaks at the drain and can make future repairs easy. Choose from a wide variety of flushing valve solutions to fit your specific plumbing need.

PROSY080/PROSY090 PRO COMPACT SYPHON DUAL FLUSH VALVE

The proven track record of this traditional siphon is proof in itself that the design is robust, easy to use and fit, the serviceability is simple and an irregular occurrence. The syphon is fully WRAS approved and has always given customer satisfaction due to its fault tolerance and usability. Due to the simple function, any issues can be easily identified and resolved. The syphon is a leak free component - providing the back-nut is tightened sufficiently the cistern cannot leak.

- The cistern does not have to be fitted to an external wall for an external overflow, so it is perfect for closet WC's or WC's which are in the middle of a building
- The overflowing water will alert the user immediately if there is a problem as the water flow can be seen running into the pan, and will cope with at least 30 l/min
- Dual Flush
- Adjustable Flush Volumes
