ANGUS AND CHAROLAIS

25<sup>TH</sup> ANNUAL BULL SALE

38 Angus Bulls

25 Charolais Bulls

Lot 1; DSK YXC Manhattan M63

**Borah Station Yards**  
1<sup>pm</sup> 16<sup>th</sup> Aug 2018

# DSK @ Sydney Royal 2018

We took 4 bulls, and had 4 winners.

- 2 Angus
  - Lot 1 (M63) Class winner & Reserve Senior Champion.
  - Lot 2 (M10) Class winner
- 2 Charolais
  - DSK TGL Max M69E (retained as DSK sire), Class winner, Junior Champion, Grand Champion, Supreme Champion Charolais
  - M59E (sold at the 2018 Charolais National), Class winner, Senior Champion bull.

Sydney Royal Easter Show 2018. Grand Champion

DSK TGL Max M69E sired by Gold Logie and out of DSK B9E. We love the depth of side and flank in this young bull along with his square stance, great feet and legs and strong sires head. Soft and easy doing with a great big ema and muscle pattern and a great temperament. Semen will be collected and available for sale. 1036kg, 144sqcm ema, 15/10 fats. July '18

DSK TGL Max at home, Jun 2018, 22 mths.

Sydney Royal Easter Show 2018. Reserve Senior Champion Pictured 21 months

Sold \* \$12,000

## Lot 1, DSK YXC Manhattan M63

Congratulations Logan Evans. Grand Champion Parader with DSK TGL Flossy at the Charolais Youth Stampede July 2018.

DSK TGL Metric M59E - Senior, Grand and Supreme Champion Charolais National Show/Sale July 2018

## Full ET brother sells as lot 22

Congratulations Jack Robson. PeeWee Champion Parader and PeeWee Champion Herdsman with DSK TGL Beatrix at the Charolais Youth Stampede July 2018.

Grandsons Sam and Jack having fun with a couple of DSK calves at the Charolais Youth Stampede Dubbo, July 2018.

“Borah Station” Borah Creek Rd, Rocky Glen via Coonabarabran NSW 2357

E : [dskangusandcharolais@westnet.com.au](mailto:dskangusandcharolais@westnet.com.au) Web: [www.dskangusandcharolais@westnet.com.au](http://www.dskangusandcharolais@westnet.com.au)

**Directions: Borah Station, 1220 Borah Creek Road, Rocky Glen, NSW 2357**

32km west of Mullaley or 34km north east of Coonabarabran on the Oxley Hwy, turn north onto Borah Creek Road, continue on gravel for 12km straight. We are at the end of the road. Follow signs to yards.

Not a stampede. Just a mob of cows and heifers walking across the barren pasture towards the feed troughs.

This is the vision of drought we have been living with for almost two years.

If there is one consolation in all this desolation, it is the reinforcement that our core breeding aims of functional, efficient beef breeding production is working well. Our cows are easy doing with big, wide, deep frames that have a huge engine room for conversion from balanced input feed diet to high output of growth, muscle, fat, milk and return pregnancy. Our cows and bulls are big but they are very efficient converters and the dollar return on our cattle remains at the top end of all markets. Frailty comes in all frame sizes and the added benefit of our big framed cows is no calving issues with big pelvic areas. All our excess breeding cattle are fattened for various markets by grain or grass and they do this quickly for an economic efficiency that pleases us most.

When you have been feeding everything for so long like we have you learn to value the cattle that will work hard for you and give greater returns, and do it with as low a management effort as possible.

We work together but it is just the two of us and like most farming families we are not getting younger, so our cattle are evolving with us. Good, even temperament and low maintenance is most important to us now and we hope that you can see this in the cattle that we present to you.

Stay safe and survive. Chris and Helen

# ANGUS RECESSIVE GENETIC CONDITIONS

Where a single pair of genes controls a trait or condition it is referred to as a simple recessive trait or condition. There may be several forms of the same gene eg black (dominant) and red (recessive) for the colour gene in Angus. These gene forms are called alleles. Two copies of the recessive allele need to be present in an animal for it to be expressed. Both the sire and dam need to be a carrier (have one copy each) to have progeny that have two copies of the recessive allele.

Arthrogyrosis Multiplex (AM), Neuropathic Hydrocephalus (NH) and red colour are examples of recessive conditions and traits in the Angus breed. In animals with only one copy of the recessive allele (and one copy of the dominant allele), the recessive allele isn't expressed and the animal is known as a "carrier" for the unexpressed trait or condition.

What happens when carriers are mated to other animals?

A carrier, will on average, pass the recessive allele to a random half (50 %) of its progeny. When a carrier bull and carrier cow is mated, there should be a 25% chance that the progeny produced will have two dominant alleles and so will never pass on the undesirable allele. There should be a 50% chance that the mating will produce a carrier. However, there could be a 25% chance that the progeny have two copies of the recessive allele. If animals free of the recessive allele are mated to carrier animals the recessive trait or condition will not be expressed at all. Approximately half (50%) of the progeny could be expected to be carriers while the other half are expected to be free.

Recessive gene status reporting

Where a DNA test can be used to determine whether an animal is a carrier or free of the recessive gene the status of animals is being reported using five categories. For example, for the AM condition:

AMF Tested AM free – have zero copies of the recessive allele

AMFU Expected to be AM free - based on pedigree analysis

AM\_\_% \_\_% probability that the animal may be an AM carrier

AMC Tested AM carrier – have one copy of the recessive allele AMA AM-Affected – have two copies of the recessive allele

allele

RDC is a tested red coat colour gene carrier and RDF is tested as red coat colour gene free.

## Sid

Hey Old Fella. You left us last year and even though we knew it was coming it was hard. One year on and it hasn't gotten any better. You were a fixture at our bull sales and cattle events so you can stay a fixture here on this page and you will still be involved. You might just have to keep your opinion on how to cook the steak just right and if the beer is cold enough to your self.

Stay good old boy and stop pinching all those angels on the bum. We miss you.

# Looking After Your New Bull & How Hard Should He Work?

## *An important understanding of bull management.*

This year it is more important than ever to care for your new bull. He will have come from a mob that is well fed with a complete nutritional balance. Your bulls will continue to grow and develop up to 4 years of age and as such require a diet to suit. Normally good pasture is more than adequate but with most areas having little or no pasture you will have to maintain his dietary needs to continue to keep his strength, fertility and growth at adequate levels. If you let your young bull crash too far he is in danger of serious and long lasting damage to his internal organs. Keeping up his essential mineral and vitamin intake is very important so he can utilize what dry feed is available. Ad lib supplement licks or blocks will do this.

Taking care of your new bull after purchase should be viewed as caring for your future genetic and financial investment. How you care for your bull in his first season can affect the long term contribution that your new genetic package will make for your herd. You will find all the pre sale feeding and health information on these sale bulls in this catalogue. Your DSK bull is fully checked, vaccinated and ready to go to work for you. But do you know just how much work he should be able to handle?

Bulls have different maturity stages but as a general rule, DSK bulls are later developers and will continue to grow well into their 3rd year of age. While a bull is still growing and developing and at the same time serving cows and maybe fighting for dominance in a multiple joining situation, he is using much more energy than a bull that has already matured. It is very important to make sure that your new bull in his first season is not overworked and underfed. This will not only affect his ability to serve cows and produce live semen, but it will have a major impact on his growth pattern to maturity which can cost you big bucks when you go to trade that bull in at the end of his working life and sell him by the kilo.

Take your bull home and settle him in for a few days with a few quiet pregnant cows, then either introduce him into his joining mob or settle him into the sires paddock. If you put him into a group of older bulls, he will be at the very bottom of the pecking order and be in danger of serious injury before you have even used him. Make sure that this paddock is large enough that bulls can retire to their own corners when they feel like they have had enough fighting. Most bulls know when it is advisable to leave a losing battle, but they need somewhere to run to. We advise that you insure your new bull for at least the first season in case of injury.

At DSK we recommend the use of single sire mating as a means of reducing injury to your bulls and also a great way of sire identifying your cattle to know which sire lines are doing the best job for your operation. Many feedlotters and prime cattle buyers prefer cattle that are sire identified. This situation can also keep your joining season short and compact. It is important that you keep mobs in a paddock that a single bull can cover, ie, he can see, smell or hear what is happening in his paddock so he doesn't miss cycling cows in small groups. It is a good idea to have a single watering point per paddock, this keeps the mob together and gives your bull easy access to cycling groups of cows.

Unfortunately with single sire mating you run the risk of unforeseen infertility in your bulls. It is most important to use bulls that have been semen tested to check for % of live sperm & imperfections, including your older bulls, and make sure that both bulls and females have had all the necessary health vaccinations and are in a condition good enough to be able to fall pregnant while milking for a calf. Check your bull at least twice a week for any lameness or swelling around the sheath or testicles and it is a good idea to try and catch your bull mating a cow to check for penis damage or abnormal serving problems such as "corkscrew penis" where the penis is twisted making mating much more difficult if not impossible. The Australian Association of Cattle Veterinarians defines a normal, fertile bull as "expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining." This expectation would apply to 2 year old bulls but not to younger bulls. Mating loads of 25 to 30 females with a frame score that the bull can easily mount are recommended for yearling bulls in a smaller paddock with good feed and water. Try and cut their joining season down to 6 or 8 weeks and pull them out into a good nutrition paddock or hand feed them to allow them to recover body condition and maintain strong growth. The condition of younger bulls is critical for their sperm production and it is recommended that they not be allowed to drop in condition below a fat score 3 during service.

We recommend strongly that you have a backup bull in case of injury or infertility, allow yourself an extra bull in your sire line up. You may even find that lessening your joining mobs in a few cases allows you to have that extra bull out working each season but doesn't over work a few of your bulls so that you can then use one or more of these as a backup bull if you find you need it.

Injury and illness can strike a bull at any time and while most times this can be managed quickly and with complete recovery it is important that whatever is holding your bull back from maximum workload be dealt with straight away. Not only can it be the difference between recovery and total loss but it is also a factor in how quickly your bull gets his mob in calf and that effects the producer bottom line.

We can not stress enough the importance of regularly checking your bulls before, during and after joining to keep the health of your investment in top shape to maintain future herd development and financial success.

## ANGUS & CHAROLAIS BREEDPLAN Understanding EBVs and Accuracy

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, ANGUS BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Direct = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

# ANGUS & CHAROLAIS BREEDPLAN Understanding EBVs and Accuracy

Days to Calving EBV (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility. Carcase Weight EBV (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcase data, adjusted to a standard 300 kg carcase. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcase. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcase. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcase weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcase. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcase. Depending on market targets, larger more positive values are generally more favourable.

## Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease. Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

For further information please contact Angus Australia or Angus BREEDPLAN or the Charolais Society or Charolais BREEDPLAN.

Accuracy range	Interpretation
less than 50%	Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree.
75-90%	Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
more than 90%	High accuracy estimate of the animal's true breeding value.

# DSK Charolais

It is with great pride and pleasure that we present this year's draft of Charolais sires which we believe are the superior draft of sires we have put forward to date. We invite your inspection of this good run of bulls.

The aim of our Charolais program is to maintain high performance and extra yield, that the Charolais breed has built its popularity in Australia on, while improving fattening ability, maternal traits and fertility.

Early on we used bulls from the world renowned LT herd for high maternal traits, then for muscle content and finishing ability we used Moongool Yokel and Moongool Encore.

In recent times our main sires have been Temana Golden Logie and DSK Kappa K25 who are making a major impact on our herd and taking us to greater heights in Charolais breeding.

Golden Logie has really set the bar high with his progeny excelling in the show ring and daughters breeding well. Golden Logie is the only bull in the Charolais breed to sire both Junior and Senior Champion bulls at 2 Royal shows with different animals. He achieved this at Brisbane Royal 2016 and Sydney Royal 2018. At Brisbane Royal 2017, Moongool Charolais (whom we share Golden Logie with) bred a Logie daughter who was the dam of the Junior Champion Female and we showed a Logie son for Reserve Junior Champion.

Golden Logie has sired the Supreme Champion at the Charolais National Showcase both in 2016 and 2018 both with DSK bred full ET brothers. Golden Logie is a big, magnificent, quiet natured sire who has been admired by everyone who sees him. Some standout sons in the sale include Lot 22 being a full ET brother to Legacy and Metric who were the Supreme Champions at the CNS mentioned earlier. Another great powerhouse of a son is Lot 14.

DSK PGRM Kappa K25E is a clean polled SVY Pilgrim son out of our Grand Champion Sydney Royal cow, Venturon Gorgeous G8 that we purchased as a heifer. We decided to use Kappa due to his high maternal pedigree, his extremely easy finishing ability, depth of side and girth, wide stance and great muscle shape, that he showed from a young age. He has a great temperament too. His draft of bulls this year have loads of commercial focus being moderate framed with good skin and hair type and big scrotal. A stud sire prospect in Lot 18 who is a real standout in his contemporaries and from a top female. We believe Kappa females are going to excel with the high maternal traits from the Gorgeous and Pilgrim lines.

# DSK Angus

As we work through the constant search for new and greater genetics to keep the Angus herd within sight of the ever changing and (fad) filled world that is Angus stud breeding, we look at the bulls that we have lined up for your inspection this year and say, I think we have got it right. The bulls are big, robust, clean skinned, deep sided, long bodied, clean shouldered, good jawed, sound made and above all else they have a powerful muscle pattern and shape that is not often seen in Angus today.

The DSK cows are hard workers that can maintain themselves in tough times that we seem to see so often. They go back in calf when asked and raise good strong heavy weaners. What more could you ask. Our breeding direction has seen us go very different ways to a lot of herds in Australia and even around the world. We pride ourselves in the fact that we have found our type of cattle by searching long and hard and doing a lot of road and paddock miles across Australia and Canada and keeping ourselves unique to many.

Remitall Rachis is a Canadian and has been a true all around sire for us with great sons selling to studs and daughters producing top sire prospects as well. His cows milk well with great teat and udder shape and the body depth, length and width of his progeny stand us in very good stead to withstand these tough seasonal times. The temperament on all his progeny is outstanding. A bull that has seen us mature into the stud we are today.

SVF Hi Road was another great old sire that bred daughters that we are still in awe of today. The greatest animals that we have bred to date have come from Hi Road daughters and with that in mind we sourced some semen and flushed a daughter of the great Three Trees Anita to have sons and daughters working well here again today. We have kept a son (DSK M11) to use on heifers as he was only minute born but he and his full brother worked there way up to being the heaviest of the weaner bulls for that year.

Young Dale Xcaliber is another Canadian sire to have made a huge impact on the DSK herd. We originally sought out this bull as we couldn't get to see a son of his that was on the semen market. After viewing the old bull we made the decision to bring in as much semen into Australia as was available. His progeny have that added wow factor of being big, robust, heavy muscled cattle. They are great on their feet and legs with power oozing but being calved small, as in heifer calving small. His daughters are working well in what has been our worst season ever.

DSK Kracker K21 is a Panda line son that we kept for his immense spring of rib and huge ema along with beautiful length of spine and neck extension and also the fact that we rarely get a Panda son or daughter that doesn't produce outstanding progeny. Kracker's are no exception with some real corkers in the draft. Big, robust and heavy.

Deer Valley All In is the ebv selected heifer sire for the year and has again produced a good solid line of sons that were all born unassisted from heifers.

01/05/2012

# Sale Information

**Sale Location:** Please note the sale will be held on property at the Borah Station Yards.

Address is 1220 Borah Creek Road, Rocky Glen NSW 2357

**Directions:** 32km West of Mullaley or 34km NE of Coonabarabran on the Oxley Hwy to Rocky Glen.

North onto Borah Creek Road for 12km to the front gates. (rough road and mind the ramps)

Continue through Borah Station front gates a further 1km to see sale yards on the hill above the hayshed on right.

Sale will start 1pm, Thu. 16th August. Please bring this catalogue with you to the sale to be sure of having one.

**Video Auction:** The sale will be conducted under cover and will be a video auction in conjunction with

AuctionsPlus and with the live lots on site for physical inspection.

**Inspections:** All bulls will be penned at the Borah Yards by 10am sale day. Private inspections are welcomed and can be arranged prior to sale day at Borah Station, by calling either the vendors or the sale agents.

**Supplementary Sheets:** Current weights, scans and scrotal measures will be available on sale day along with any catalogue alterations or withdrawals & DNA results. Be sure to get one when you arrive.

**Insurance:** Purchaser to arrange insurance cover where required. A representative will be available on sale day to take care of your livestock insurance needs or contact the selling agents to arrange this for you.

The Vendors and their Agents take all care but no responsibility for lots after the sale has been made.

**Rebate:** A 2% rebate will be payable to outside agents on condition that they either attend the sale and introduce themselves to the selling agents, or who nominate potential purchasers in writing prior to 5pm on Wed 16th August with the selling agents. Agent rebate is conditional upon full settlement of account within 7 days of sale and will be strictly adhered to.

**Transport:** DSK will provide transport up to 300km. Bulls can also be taken on the day in your own transport.

The selling agents will act as transport co-ordinators so please do not leave the sale before arranging transport with them. Scott Cooper 0427674411; Patrick Purtle 0428851704; Sam Plevey 0427856223

**Bid Card System:** The sale will be conducted under the bid card auction system with all standard terms and conditions of sale as stated by the NSW Livestock Agents Association and all potential buyers are required to register all relevant details with the selling agents prior to purchase and a delivery and instruction sheet upon completion of the sale for all purchases. No verbal delivery instructions can be accepted and written instructions must have full contact details of delivery location along with legible directions.

**AuctionsPlus:** The sale will be interfaced with AuctionsPlus. Video, pictures and lot details will be available.

**Fertility and Health:** Bulls have been fully vaccinated and are up to date 6th Aug including booster shots with 7in1, Pestigard and Vibrovax. Bulls have been drenched with Eprinex Pour On and semen tested and inspected externally and internal palpation by Bovine fertility specialist, Dr Ced Wise B.V.Sc., M.S., Diplomate ACT, M.A.C.V.Sc. All bulls have been tested negative for BVD PI from the State Veterinary Diagnostic Laboratory. Bulls are in good forward condition and are ready for immediate work. Borah Station is JBAS 7 for Bovine Johnes Disease and is a self replacing beef only herd.

**Foot Trimming:** No bulls in this draft have been hoof trimmed.

**NLIS:** Please note that it is the purchasers responsibility to transfer lots upon receipt unless arranged otherwise with your agent. NLIS numbers at sale time will be on the supplementary sheet available on the day.

**Fertility Guarantee:** Please speak to the vendors within 12 months of sale if you feel you have a fertility problem with your bull. All efforts have been made to ensure your bulls are suitable for work under appropriate conditions. Please note that injuries, illness or infertility due to malnutrition or mistreatment after the sale are the responsibility of the purchaser.

**Bull Groups and Feeding Programmes:** All bulls have been pasture raised and lightly finished on a barley grain / straw/hay mix and fed at a 0.5% body weight ration in feed troughs daily as well as ad-lib oaten hay.

Group 1 - are the 3 Angus show bulls that have been running together since January 2018.

Group 2 - are the rising 2 year old Angus group since weaning and in a mob of 23 since January 2018.

Group 3- are the rising 2 year old Charolais group since weaning and in a mob of 23 since January 2018.

Group 4 - are the long yearling Angus and 3 Charolais bulls and have been running in a mob of 17 since weaning. Also in this group are 2 year old bulls Lot 4 and Lot 42 since February 2018.

**Disclaimer:** While every care is taken to ensure the safety of all persons and property the vendors and their agents are not liable for any damage or injury caused or contributed to by us or by any other person whether caused or contributed to or by negligence, deliberate act or unlawful conduct. This applies to the owners, agents and their employees of the business activities of CR Knox and HD Alexander. Persons enter the sale pens at their own risk. Absolutely no children to enter the bull pens. For your safety only able bodied persons allowed into the pens. Bulls are unpredictable large animals and all care must be taken when handling any livestock.

 White Polled      **Group:** 3

**CHAROLAIS**

YACCAMOO COWBOY (PIK C15E) (P)  
**Sire:** TEMANA GOLDEN LOGIE G66E (TJ G66E) (P)  
 TEMANA X104 (TJ X104E)  
 MOONGOOL YOKEL (DP2 Y218E)  
**Dam:** DSK MY ESTELLE D34E (DSK D34E)  
 DSK T100E ESTELLE W5E (DSK W5E)

**Comments:** Stud sire prospect. Full ET brother to Legacy and Metric who both won Supreme exhibit at the Charolais National Showcase in 2016 and 2018 respectively. Great temperament, top sire outlook, smooth shoulder, strong polled head, well muscled and on a good set of legs and feet. Dam is a great cow with embryos selling to \$2,900 each at this year's National. We have a full ET sister that looks magical. This bull has not reached his peak due to bullying in the mob. M53 would be an asset to any herd with the successful pedigree behind him.

**Dam:** CAN1375944 BROOKMORE TIBBIE 222T  
 BROOKMORE TIBBIE 35N

**Comments:** Moderate birth, explosive growth, lots of muscle and width of frame. We were attracted to this sire by the depth of side and extra butt shape in his progeny. Sons have sold to \$147,000 at Young Dale in Canada and in 2016 sons won the prestigious Car Load Pen of Bulls at the Denver Stock Show. DSK sons have shown well at Sydney Royal with 2 sons winning strong classes and DSK M63 being awarded the Reserve Senior Champion Angus this year. Daughters are breeding well and milking well on good udders. Calves have all been born very easy to date.

## REFERENCE SIRE

### CHAROLAIS **TEMANA GOLDEN LOGIE G66E (P) (R/F)**

Herd Ident: TJG66E Red Factor Polled

TEMANA XOROX

Sire: PIK C15E YACCAMOO COWBOY C15E (P)

YACCAMOO X20E (P)

MEILLARD RJ 7196103834

Dam: TJ X104E TEMANA X104

TEMANA LORETTA L78E (P/S)

**Comments:** Owned in partnership with Moongool stud and breeding exceptional progeny. They have excelled in both the show ring and the sale ring. His daughters calve out well with good udders. Logie is a big, magnificent, quiet natured sire who has been admired by everyone who sees him. He is the only bull in the Charolais breed to sire both the Junior and Senior Champions at 2 Royal shows. Brisbane Royal 2016 and Sydney Royal 2018.

## REFERENCE SIRE

### CHAROLAIS **DSK PGRM KAPPA K25E**

Herd Ident: DSK K25E White Polled

SVY PIONEER 402P (D)

Sire: OAC B3031E SVY PILGRIM PLD 655S MC303031 (P)

HFCC FRENCHKISS 919J

VENTURON CRUSTY DEMON C5E (P)

Dam: VE7 G8E VENTURON GORGEOUS G8E (P)

VENTURON ELLA E5E (P)

**Comments:** K25 was a must use sire with the combination of his great doing ability and a son of the standout cow, Venturon Gorgeous who was Grand Champion at Sydney Royal 2014. Kappa has a great first draft of sons in the sale with a real sire standout in lot 18

# Notes

## ***One of those Rare and Exceptional Cows***

### **DSK GDK Flower G124 or “Pods” to us**

During a lifetime of beef cattle breeding, you breed or see plenty of top cows but then comes along those special cows that excell and raise the bar much higher than normal.

G124 is one of these rare females. Loads of capacity and volume, big milker with a great udder and teats. Excellent structure with a truly unbelievable temperament. The orphaned poddy calf and pet cow that grew and developed into a successful donor that we hope will have a major influence in the DSK herd with plenty of promising calves on the ground for the future. Dam of lots 1, 4 and 7.

### **DSK MY Estelle D34E**

Dam of DSK TGL Legacy and DSK TGL Metric M59E both were Grand and Supreme Champion Charolais at the Charolais National Showcase both in 2016 and 2018.

Dam of lot 22.

### **Young Dale Pollyanna 22P**

Beautiful depth of side and length of body. great neck extension and blended shoulder. Square hipped and wide ribbed with a great udder.

Canadian Donor dam. We purchased embryos in this powerhouse of a cow by 4 different sires. We will have more of these young bulls with that extra depth and width in future sales. Dam of lots 44 and 56

Choose DSK bulls to breed efficiency and profitability into your herd.

Lot 6; DSK DVAI MELVIN M71

**Proven Quality,  
High Yielding  
Beef Production**

Breeding Award winning steers and carcasses in all major Carcase Competitions, Feedlot and Grass Fed Trials across the Eastern States. Gold, Silver and Bronze awards with purebred carcasses many years running.

Lot 14;
