3D Plastics Is Available To Help

When things get tough 3D Plastics always finds a way.

With non-essential orders being put on hold, 3D Plastics has open machine time for additional medical and defense production. 3D's 11 molding presses, ranging from 18 to 310 ton with shot capacities of 1/2oz to 26oz, can be utilized during this critical time for covering a wide range of product configurations.

3D also has the space and manpower to take on contract manufacturing and assembly of critical components and product lines.

With over 75 years of combined knowledge in the industry, 3D Plastics' staff are able to assist with project development, product design, and determine what is the most economical way for your drawing to become a tangible product. 3D also offers a variety of additional services that can help give added value to your product. 3D Plastics is your full service supplier for all your plastic needs, from concept to final product.

3D can help turn a CAD drawing into a physical, tangible product with high resolution and high quality at an affordable price.

For fast response inquirers and quotes, call 503.537.0979, or email:
