# Windows 10

Windows 10 Deployment

Rapid Windows 10 deployment for the NHS

With Altiatech's Rapid Start Deployment, we can start rollout in less than 2 months with our unique process that includes readiness assessment, discovery workshop, health checks and App compatibility and testing, leaving you with a secure and feature-rich Windows 10 Deployment. Deploying Windows 10 will enable you to deter viruses, malware and malicious intent before they are able to spread.

Time to Prepare

With the deadline for NHS organisations to upgrade to Windows 10 nearing, there is still time to prepare for a successful rollout. With various stages to achieve a successful transition to consider, Altiatech can manage the entire deployment process with its dedicated team of Windows 10 experts.

Every Windows 10 deployment will require the hardware and software compatibility testing to ensure a smooth rollout to end users and avoid costly downtime in critical locations. Our specialist team will minimise the impact to clinical teams and enable business to run as per normal.

"The intuitive usability of Windows 10, integrated with our Surface Pro devices and Skype, empowers our staff to self-serve more than they ever could."

Andre de Araujo: Head of IT
Greater Manchester Mental Health NHS Foundation Trust

Microsoft

Windows 7 End of Support

After 10 years, support for Windows 7 is coming to an end on 14 January 2020. Windows 7 devices will still function after this date, but Microsoft will no longer provide the following:

- Technical support – no further assistance on using Windows 7
- Software updates – unsupported features to limit productivity
- Security updates or fixes – devices are vulnerable to attack

While you could continue to use PCs with Windows 7, doing so greatly increases the risk of cyber-attacks, as well as undermined productivity with limited features.

Simplified Updates

IT departments can use Windows 10 tools and insights to simplify deployment and updates, thereby freeing resources to drive more business value. With ever tightening budgets and increasing patient demand, the NHS is increasingly having to achieve more with less. Using your chosen Management tools, Altiatech can help the smooth management and operation of your Windows 10 deployment in the long term, assisting with monitoring and updating the service, allowing more time to focus on your patient care and administration.

The Forefront of Security

From Windows Information Protection to Windows Defender Advanced Threat Protection, Windows 10 includes the most advanced technology to protect your data. With Cyber Attacks an ever-growing threat to the NHS, the importance of security cannot be understated. The ability of Advanced Threat Protection to detect, investigate and automatically respond to potential threats will allow for quicker more immediate action to be taken to protect the Organisation and patient data, leading to better care across the board.

A Guard Dog for your Data

Windows 10 changes the game for security in organisations by protecting user identities, devices, and information with a comprehensive solution, driven by intelligence that only Microsoft has to offer. Customers deserve intelligent endpoint security that is built into the platform itself, not bolted on top of it. With that in mind, NHS organisations can rest assured they have the best defence against any possible cyber-attacks when adopting Windows 10 with Altiatech.

Focus on empowering your organisation with the most secure Windows ever. Always up to date with the latest protection, productivity, and advanced IT tools.

Contact Altiatech today and learn how Windows 10 can offer superior protection and faster transformation than ever before.
