

Cascata Water Butt Instruction and Care Manual

Please read through all instructions before starting. *The water kept in the Cascata water butt is for gardening purposes only and should not be consumed by humans or animals.*

TO START

To install your Cascata water butt, you will need a down spout and a Flat Head Screw Driver. Everything else needed for installation is included with your Cascata. A diverter is not required for installation.

Start by choosing a location for the Cascata water butt where there is a down spout nearby.

1. Place the Screen Guard in the open area on the top of the Cascata water butt.
2. Attach the Hook for the Hose to the Cascata water butt by placing it onto the ledge with the dimple, under the crown planter.
3. Attach the Nozzle with Shut-off Valve to the threaded end of the hose.
4. Attach the cut end of the Hose to the base of the Cascata water butt : Place the clamp over the hose, then insert hose over elbow connector. Use a Flat Head Screwdriver to tighten the clamp over the hose and the elbow connector. Then screw the threaded end of the elbow connector into the hole at the base of the Cascata.
5. Attach the tap to the body of the rain barrel. To prevent leakage, apply teflon tape to the tap's threads. Screw the tap in until it is tightened- do not over-tighten the tap.
6. What to do with overflow: connect a length of 1.5 inch tubing to one of the 2 overflow valves at the back (hose clamp and tubing not included). Run the tubing away from your home. The 2nd overflow is used by the Algreen linking kit to link multiple water butts together. Note: the overflow valve may need to be cut open with a hacksaw or small pocket knife before tubing can be clamped onto it.

USING THE PLANTER

The Cascata water butt was designed to fill a watering can. Purchase the Algreen pump kit (optional upgrade) to water directly from the rain barrel. To use the Cascata's crown planter, simply drill holes inside the planter. Fill the planter with soil and place plants inside.

CARE AND MAINTANCE

The Cascata water butt needs little care. The unique design of the Cascata Rain Barrel allows it to withstand extreme weather. During the winter months, drain the water inside the Cascata Rain Barrel by leaving the tap and green nozzle open.

WARRANTY

The Cascata Rain Barrel carries a 20 Year Limited Warranty on the barrel only. All accessories included in with the Cascata water butt are NOT included in the Warranty. The Warranty covers manufacturers' defects only and does NOT cover neglect or owner's misuse.

Valid proof of purchase must be presented to make a warranty claim.

TIP To divert water away from your home, clamp a length of 1.5 inch tubing to an overflow valve (tubing and clamp not included). The extra overflow is to accommodate the pump and linking upgrade kits. Purchase the Algreen pump kit to water your plants directly from the rain barrel.
