

Lazy jacks are designed to contain the mainsail when reefing or dousing. PTR Jacks are easy to deploy and stow with no parts or lines that are subject to or cause chafe. We offer standard and off-shore options dependent on your sailing goals. Our system has Amsteel catch lines and double braid control lines. The kit includes blocks and fasteners. No modification of your sail cover is required.

Selden boom slides are available for our customers that have Selden booms. These come in two sizes dependent on your boom section.

* At the termination point for the control line there is often an existing fixture which can be used. If not, we offer Spinlock PXR camcleat or Schaefer cleats for control line termination. We also offer Wichard clips for ease when changing to a trysail.

Please see our price sheet for prices.
