

Java Software Engineer  
Central London  
Permanent  
50k basic + 5k Bonus + Pension, Childcare Vouchers and Comprehensive Medical Insurance.

### **The Company**

Our client is a leading Software provider who employs over 4,000 staff across 50+ Countries. With a Turnover of over £1 billion and share prices doubling in the past year the company is now looking to expand its Software Development Team with the addition of an experienced and ambitious Java Software Engineer who is willing to learn, adapt to, and utilize new technologies

### **The Role**

The Java Software Engineer will join a successful and friendly team that designs, builds and tests the globally successful software products the companies provides to its customers. This is hands on coding role however you will be given an opportunity to mentor junior staff on a weekly basis and work alongside Senior Management to provide improvement and recommendations.

You will work on a variety of projects covering areas including performance engineering, improving usability, distributed and fault tolerant systems design, evaluating and integrating new technologies. Occasionally this role might include customer-facing interaction. The Java Software Engineer will join the close knit and highly skilled multi-disciplinary team that designs, builds and tests the globally successful 'Universal Messaging' product.

### **The Person**

- Degree in Computer Science or closely related subject, with a Masters or Ph. D. degree being considered highly desirable
- 2-6 years experience in Java Development
- Must be aware of programming techniques such as multi-threading
- Ideally have experience of mentoring Junior Developers
- Highly-motivated, assertive and skilled individual, who will bring to the role important skills but will also be keen to learn new ones on an ongoing basis as the role develops.
- Experience of commercial software engineering, working practices and methodologies, especially agile software development.
- Experience of on multiple platforms including Windows, Linux and Mac OS-X.
