Zoono is a safe, environmentally friendly technology. It creates an invisible shield on hands and surfaces, providing long lasting protection against harmful bacteria, viruses, moulds and fungi.

How Does It Work?

Once applied as a liquid mist, foam or with a wipe, Zoono leaves behind a dry monomolecular layer that is permanently bound to the surface.

The molecule resembles an antimicrobial spike piercing the microorganism. The “vibration” in the layer of spikes disrupts the complex molecular structure of cell walls, membranes of bacteria, fungi and yeasts as well as the structure of viruses. This causes the destruction of the organism with lethal effect, “popping it like a balloon”.

Zoono’s physical kill replaces the need for poisons, chemicals and alcohol. This method of rupturing the cell means the cell cannot mutate, preventing the development of superbugs.

Protecting Differently...

- Lasts up to 24hrs on the skin even after washing
- Lasts up to 30 Days on surfaces even after cleaning
- Lasts up to 50 Textile washes
- Environmentally Friendly

Water Based - Alcohol Free - Non Toxic

Other sanitisers traditionally use poison or alcohol to kill but have no lasting properties – hands and surfaces can easily become contaminated again.

Once Zoono has bonded to a surface, it provides continuous protection and kills any new pathogens repeatedly. Zoono has been tested against over 100 common pathogens including Hospital Superbug MRSA, H1N1, Norovirus, E Coli Salmonella and MERS.

Zoono technology is not a replacement for routine cleaning. However, most surfaces are recontaminated within 1–2 hours after disinfection. Zoono provides a protective layer to prevent recontamination on any surface in any clinical, business or domestic environment.
MANUFACTURED IN NEW ZEALAND, ZOONO PRODUCTS HAVE BEEN TESTED AND PROVEN INTERNATIONALLY. THEY ARE NOW DISTRIBUTED GLOBALLY TO OVER 40 COUNTRIES.

Zoono Why?

In a world where antibiotics are becoming less effective, our range of Zoono products have been tested around the world and have achieved impressive results against a broad range of pathogens.

Testing has demonstrated that Zoono is effective at significantly reducing the spread of harmful bacteria, viruses, Fungi (Mould) and yeasts.

Product Range

Our product range has been developed to meet the demands of our clients and their varied requirements.

Endless Benefits and Potential Uses:

- Cost Savings
- Reduction in Absenteeism
- Fewer Colds and Flus
- Reduced Risk of Serious Illness
